

SAURABH RANJAN

Gainesville, FL, U.S.A. • ranjan.saurabh@outlook.com • saurabhr.github.io

Ph.D. Cognitive Neuroscientist | AI / ML Researcher | Cognitive and Machine Psychology | NeuroAI

EDUCATION

Ph.D. Psychology — Behavioral & Cognitive Neuroscience University of Florida, USA | 2025

Dissertation: [Reality Monitoring in Humans and Artificial Intelligence](#)

M.Sc. Cognitive Science University of Allahabad, India | 2018

Thesis: [Intentional Binding in Future-Directed Intentions](#)

B.Sc. Physics Birla Institute of Technology, Mesra, India | 2016

TECHNICAL SKILLS

AI / ML & LLMs: evaluation pipelines for LLM safety and hallucination detection, agentic workflows, retrieval-augmented generation (RAG), prompt engineering; PyTorch, HuggingFace, LangChain, LangGraph, Pydantic, scikit-learn

Interpretability & Representational Analysis: linearizing encoding models and temporal generalization analysis (linear probing of internal representations across layers and time), psychological network analysis for comparing representational structure across human and model populations, large-scale multivariate signal decoding (MEG/EEG with MNE, fMRI with Nilearn/SPM), predictive modeling on biobank-scale data (UK Biobank RS-fMRI → phenotype prediction)

Statistical Modeling & Evaluation Design: Bayesian hierarchical models (PyMC3, brms), signal detection theory, generalized mixed-effects models (lme4), multinomial processing trees, network analysis (bootnet, qgraph), causal & metacognitive modeling

Data Engineering & MLOps: Python (expert), R (advanced), MATLAB, Bash; pandas, NumPy, Git/GitHub, SLURM/HPC, containerized environments, large-scale behavioral data collection (Prolific, Qualtrics, PsychoPy/JS)

Visualization & Communication: seaborn, matplotlib, plotly, ggplot2, tidyverse — publication-ready figures, dashboards, and stakeholder reporting

RESEARCH EXPERIENCE

Researcher — AI for Biomedical Health Outcomes 2026

University of Florida, Gainesville, FL

- Build agentic AI systems (planning, reflection, tool use, multi-agent coordination) for clinical and medical decision-making, establishing UF's evaluation methodology for agentic-system design.
- Engineer reproducible research pipelines (PyTorch, LangChain/LangGraph, SLURM/HPC) that run and evaluate agentic workflows at scale.
- Co-develop UF's Master's-level curriculum on Data Science and Agentic LLMs for [UF AI for Biomedical Health Sciences \(AIBHS\)](#).

Graduate Researcher 2020 – 2025

Odegaard Lab & UF Department of Psychology, Gainesville, FL

- Discovered that LLM source-attribution accuracy reverses under episodic memory delay, tested across 2 experiments and 6 transformer-based LLMs (Gemma3, Llama3.3, Llama4), a hallucination-relevant failure invisible to single-turn benchmarks.

- Found that corrective feedback produces two distinct metacognitive failure modes and that failure severity tracks active, not aggregate, parameter count, publishing the result as a preprint (arXiv:2607.23927).
- Designed and ran matched experiments with 100+ human participants and parallel LLM simulations, producing a reusable human-LLM benchmarking pipeline.
- Applied neuroimaging decoding methods ([MEG temporal generalization](#), [fMRI encoding models](#)) on UK Biobank-scale data, using the same linear-probing logic now standard in LLM interpretability.
- Built psychological network models from 2,743 human participants and 6 LLMs (12B-272B parameters), showing human representational structure replicates across populations ($r = 0.31-0.93$) while LLMs fail to reproduce it at any scale.
- Authored [Psych Scanner](#), an open-source Python framework for running LLM cognitive experiments at scale.
- Mentored 7 undergraduate researchers and taught a full segment of Physiological Psychology.

Research Assistant 2019 – 2020

Center of Behavioral and Cognitive Sciences, University of Allahabad, India

- Found stronger intentional binding, a measure of sense of agency, for predictive intermediate outcomes than non-predictive ones, replicated across three delays (300/500/700ms) and two contingency levels; published as an [OSF preprint](#).
- This construct, monitoring one’s own actions, now underlies how agentic AI systems track and self-correct across multi-step plans.

Research Assistant 2018

Homi Bhabha Centre for Science Education, TIFR, Mumbai, India

- Contributed statistical analysis for Touchy-Feely Vectors (TFV), a gesture-based tool for teaching vectors, piloted across 266 grade-11 students (3 experimental, 3 control classrooms); the experimental group reasoned differently about vectors and showed higher engagement. Published in [IEEE T4E 2019](#).
- Contributed statistical analysis for a 3-year field study of TFV (135 control vs. 131 experimental students), finding it improved model-based reasoning in stronger students and engagement in average ones. Published in the [Journal of Computer Assisted Learning](#), 2021.

AWARDS & FELLOWSHIPS

- 2025 — College of Liberal Arts and Sciences Travel Award, University of Florida
- 2025 — Threadgill Dissertation Fellowship, University of Florida
- 2024 — Scott O. Lilienfeld APS Travel Award, Association for Psychological Science
- 2024–2025 — UF Department of Psychology Travel Awards ($\times 4$)
- 2020–2025 — Graduate Student Fellowship, UF Department of Psychology
- 2016–2018 — Graduate Merit Scholarship, Centre of Behavioral & Cognitive Sciences, University of Allahabad
